No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                          // SIDS2/gcddata/geneseqy-embl/AA1980.DAT:*

                                        The present sequence is a firefly protein which regenerates luciferin busing oxyluciferin and D-cysteine. This protein can be used for regeneration of luciferin, a substrate for luciferase, used for ATP (adenosine triphosphate) assays in both medical and food hygiene areas.
                                                                                                                                                                                                                                                                                                                                                                                                                              Luciferin regenerating protein; luciferen; oxyluciferin; luminescence;

                                                                                          The present sequence represents a protein capable of regenerating luciferin. The protein can especially regenerate luciferen from oxyluciferin. The protein can be added to the luciferin-luciferase reaction system to sustain luminescence and reduce the amounts used. The polynuclochide sequence is useful for producing recombinant transformants, which are useful for the production of proteins useful in assaying ATP in medical sciences and food hygiene.
                                                                                                                                                                                                                                                                                                                                                                                                                             1 MGPVVEKIAELGKYTVGEGPHWDHETQTLYFVDTVEKTFHKYVPSQKKYTFCKVDKLVSF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                 Luciola lateralis-originated genes encoding proteins capable of regenerating luciferin especially from oxyluciferin, useful for producing recombinant DNAs and transformants to give proteins useful in
                                                                                                                                                              The present sequence represents a protein capable of regenerating luciferin, which is isolated from Luciola lateralis (Japanese firefly). The gene encoding the protein capable of regenerating luciferin can be used for producing recombinant DNAs and transformants, which can be used for the production of proteins useful in assaying adenosine triphosphate (ATP) in medical sciences and food hygiene. The protein can be added to the luciferin-luciferase reaction system to sustain luminescence and reduce their amounts used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WTGTMAIDAGL-PVGPVTGSLYHLGADKKVKMHESNIAIANGLAWSNDLKKMYYIDSGKR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SNQRPLFTFEK -- HEVPGYPDGQTIDEEGNLWVAVFQGQRIIKISTQQPEVLLDTVKIPD 251
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      73
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            74
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                           olated nucleic acid detection reagent for detecting 1000 or more from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics and pharmaceutical frugs. The invention in higher euckaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGIT6 ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PQVTSVAFGGPNLDELHVTSAGLQLDDSSLDKSLVNGHVYRVTGLGVKGFAGVKVKL 308
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             16 VGEGPHWDHETQTLYFVDTVEKTFHKYVPSQKKYTFCKVDK--LVSFIIPLAGSPGRFVV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             190 TLSISNQRPLFTFEKHEVPGY--PDGQTIDEEGNLWVAVFQGQRIIKISTQQPEVLLDTV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             248
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        307
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    73
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               74
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  VGEGPHWDHETQTLYFVDTVEKTFHKYVPSQKKYTFCKV--DKLVSFIIPLAGSPGRFVV

The invention relates to a senescence marker protein 30 (SMP30) non-human animal having a defect in the SMP30 function. The animals are useful for producing antibody, evaluating its biological function, histopathological diagnosis and onset mechanism of disease due to aging, and in screening side-effects during development of drug and cosmetics including for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SLEREIAILTWDGVSAAPTSIEAIVNVEPHIKNNRLNDGKADPLGNLWTGTMAIDAGLPV 133

It encodes the human ageing marker protein, SMP30 (AAR74219). Human SMP30 is found in human organs, tissues, blood, urine and cerebrospinal fluid. The blood concentration of SMP30 is known to increase with renal and hepatic deficiencies and to decrease with age. It is therefore useful in the monitoring of renal or hepatic deficiencies and for the monitoring of the development of the liver and kidneys in newborn babies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      17 GESPVWEEVSNSLLFVD-----IPAKKVCRWDSFTKOVQRVTMDAPVSSVALROSG

The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule: and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer renal cancer, colon cancer, gastric cancer, prostate cancer and

                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of human senility marker protein (hSMP30) which has a molecular weight of 30 kDa. Monoclonal antibodies recognising hSMP30 are claimed and can be used in a method for detection of the hSMP30 protein in a sample.

                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequences AAB11630-B11688 represent proteins from Adrobacterium vitis which elicit a hypersensitivity response (HR) in a plant. The invention also relates to nucleotide sequences (AAA61501-A61524) encoding the A. vitis HR elicitor proteins. The HR is a rapid, localised necrosis that is associated with the active defence of plants against many pathogens, and occurs when a pathogenic organism interacts with a nonhost plant (i.e. one in which intracellular bacterial growth and disease development of non-host plants by causing a rapid hypersensitive response that connon-host plants of and killing of the pathogen. On grape plants, the control of plant cells and induction of pathogen resistance. A. vitis elicitor induces a restricted necrosis of tissues, resulting in the elicitor proteins, in non-infectious form, are used to treat plants or their seeds to impart resistance to disease, such as those caused by fungi, bacterial or viruses; and to enhance growth, e.g., to increase the last or browide earlier germination or maturation. The proteins can also be used to control insects, to impart resistance to environmental stresses, e.g., cold, and to improve mutritional value, e.g., altered oil content. The same effects can be produced by producing transgenic plants or seeds by incorporation of DNA that encodes A. vitis HR elicitor content. We allow control of previously untreatable diseases; provide them, may allow control of previously untreatable diseases; provide expense the need for biological control agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      74 SLEREIAILTWDGV---SAAPTSIEAIVNVEPHIKNNRLNDGKADPLGNLWTGTMAIDAG 130

Sequences Ambition Legiblesent process. It now Agrical Sequences Ambition Sequences Ambition February 1971.

Which elicit a hypersensitivity response (HR) in a plant. The invention also relates to nucleotide sequences (AAA61501-A6154) encoding the A vitts HR elicitor proteins. The HR is a rapid, localised necrosis that is associated with the active defence of plants against many pathogens, and occurs when a pathogenic organism interacts with a nonhost plant (i.e. one in which intracellular bacterial growth and disease development of non-host plants by causing a rapid hypersensitive response that in non-host plants by causing a rapid hypersensitive response that carelly a nating-off and killing of the pathogen. On grape plants, the control investing and induction of pathogen resistance. A vitis elicitor induces a restricted necrosis of tissues, resulting in the elicitor proteins, in non-infectious form, are used to treat plants or their seeds to impart resistance to disease, such as those caused by fungi, bacteria or viruses; and to enhance growth, e.g., to increase yield or to provide earlact germination or maturation. The proteins can also be used to control insects, to impart resistance to environmental stresses, e.g., cold, and to improve nutritional value, e.g., altered oil content. The same effects can be produced by producing transgenic plants or seeds by incorporation of DNA that encodes A, vitis HR elicitor proteins. Use of A, vitis HR elicitor proteins, and allow control of previously untreatable diseases; provide them, may allow control of previously untreatable diseases; provide systemic treatment; and eliminate the need for biological control agents or polluting chemicals.
                                                                       New protein from Agrobacterium vitis, useful e.g. for imparting resistance to disease or stress to plants, is involved in production of

designated ORF (open reading frame) 1-4534, and sequences ABN75054-
ABN79587 represent CDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORFT-ORF4534 (collectival) referred to as ORFX) proteins, polymcleotides at least 80% identical to the ORFT-ORF4534 (collectival) referred to as ORFX) proteins, polymcleotides at least 80% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polymcleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of screening for modulators of ORFX expression or activity, and methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide carried of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, heamatopoiesis regulation, tissue growth, anglogenesis, activity, thrombolytic activity, chemotactic/chemokinetic activity, haemostatic activity, thrombolytic activity, and antihodies activity, and may also be involved in the determination coll bodily characteristics, fertility and behaviour. ORFX proteins, other proliferative disorders such as psoriasis and benign tumours, and antihogical disorders such as psoriasis and benign tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cardiovascular diseases, immune system disorders, disorders related to organ transplantation, disorders of tissue growth and regeneration, diseases such as disorders of tissue growth and regeneration, storage diseases such as disorders mellitus, hypothyroidism, and cholesterol ester storage disease, and infectious diseases caused by viral, bacterial, fungal and other pathogens. ORFX nucleic acids may also be used as a source of primers and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous sequences, in genetic diagnosis, and in forensic biology. The ORFX nucleic acids may additionally be used to produce transgenic animals which may be useful for studying the function and/or activity of ORFX protein, and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   115 DPLGNLWTGTMAIDAGLPVGPVT----GSLYHLGADKKVKMHESNIAIANGLAWSNDLK 169

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Higher-plant chloroplast and cytosolic 3-phosphoglycerate kinases: case of endosymbiotic gene replacement.";
Plant Mol. Biol. 30:65-75(1996).
-!- CATALYTIC ACTIVITY: ATP + 3-phospho-D-glycerate = ADP + 3-phospho-D-glyceroyl phosphate.
-!- PATHWAY: Second phase of glycolysis; second step.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: BELONGS TO THE PHOSPHOGLYCERATE KINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                     Indels 141;
